

Free standing shelf – galvanized Galvanized

STRING FURNITURE

The free standing shelf intended for outdoor use from String® System fits equally well on a smaller balcony as on a larger terrace. The shelf is completely free standing but, if desired, can be secured to the base it is standing on. A complete section of the free standing shelf consists of one back panel, two uprights and two galvanized floor panels with height 85 cm and depth 30 cm. To build additional sections, you need one upright along with one panel for each section. We recommend at least one back panel, preferably placed in the middle, for a free standing shelf consisting of three sections. Add hooks to increase the storage possibilities. One section has the dimensions: width 61 cm and height 87 cm.

Care and maintenance

Our panels are hot dip galvanized, a surface treatment designed to give the panels the power to withstand moisture and the ability to self-heal from minor damages. Hot dip galvanizing also protects the panels from corrosion and requires no maintenance apart from regular cleaning. The method gives the surface a variation in colour, the grey tone of the panels might differ marginally due to this technique. With time any variation will even itself out. Wipe off any dirt with a damp cloth if necessary.
String galvanized shelves are self-healing. The metal ages but will never corrode. This shelf can withstand any weather and requires no maintenance apart from regular cleaning.
